Objective

Being a Developer was always inside me. I've spent a good amount of time trying to solve errors in my computer when I was a kid. After a long time of being a musician and other jobs that didn't had anything to do with me, I decided to try learning programming at the faculty. I really fell in love with it and now I see it's not that easy but I still want to do it. Learning to play the guitar was hard too 😊

Graduation

Associate Degree in Systems Analysis and Development at Faculdade [FACEC](#) in 2021.

Postgraduate in Software Development with Agile Methodologies (Ends in March, 2023)

Skills and Knowledge

HTML, CSS, JAVASCRIPT

I started with Java at the faculty but when I got to web development classes, I started learning a lot of HTML and CSS. After that I got a trainee job and learned the basics of Javascript, MySQL and Git. I've also collaborated in some projects inside the company, I've left some of them at the Job Experiences section.

GOLANG

Golang is a roller coaster to me, its a different language to learn and seemed quite impossible, but after I study some C basics, it started to make a lot more sense. In February of 2022 I went back studying Golang again, after 3 months studying Game Development and .Net. I believe that Golang is going to grow a lot more in the future thats why I decided to Go back. I'm still learning, but I think all of us are.

COMMUNICATION

I've always been the one who presented the papers in school and college. I'm not too ashamed to give my opinion in workplaces and the public. But I'm a little shy about talking to the cameras on social media, sometimes I feel ashamed of speaking english, but that goes away fast.

Job Experiences

FRONT-END DEVELOPER | ARUS T.I | MAY 2021 – AUGUST 2021

- Creation of the front-end of a bet365 style application called PlacarX, this application was still in development when I left the company. Golang was used as a framework to convert the code into WebAssembly, styling was done with HTML and CSS and page movement was done with JS being handled by Golang.
- Created the company's landing page from the designer's layout using Golang to manipulate Javascript, html and css.

INTERNSHIP | [DIGITAL ONE](#) | AUGUST 2020 – FEBRUARY 2021

- Created the website interface from scratch from the layout provided by the designer using CSS, HTML and JS.
- Styled old sites and modernized them together with the team designer as in this example from [Bless](#).
- Re-styled the admin panel for a site called [BrainLatam](#) and added some new features like counting likes on posts and creating blogs within the website.
